

Dtex's latest offering helps companies monitor and protect servers

The latest Dtex offering, the Dtex InTercept, enables companies to monitor and secure server their infrastructures by helping identify privileged account misuse, unauthorised use of administrative tools, unusual application updates and behaviour, systems configuration changes, domain fronting and more.

Dtex InTercept provides customers with the mission-critical ability to pinpoint threats early in the kill chain and identify risky behaviour before exfiltration attempts occur. Some key capabilities and features of Dtex InTercept include privileged access monitoring, critical file monitoring, predictive data loss prevention and performance interoperability.
